

Vaccination Pods

Due to the Governments mass vaccination details, following the Corona virus Covid-19 pandemic, the NHS and all local council authorities will be requiring large-scale vaccination areas, possibly looking at using Leisure centres, village halls etc, with the ability to handle 1000s of vaccinations every day.

We have the facility supply various standard booth configurations, most popular size being at various sizes, using our standard modular SYSTEM. Not forgetting the Safe-Vu range of standard protection screens, also used during these unusual times.

All vaccination booths/screens can be supplied with various easy clean foamex, dibond or acrylic panels or our easy build frame system only, for own use panels.

Due to a large stock holding, of the modular system, we can supply as many vaccination POD/screens and with our logistics team, quickly, throughout the UK.

The pods/screen can be configured for maximum privacy. We are also happy to work with you on a supplied floorplan, to maximise the number of booths/screens available in the space provided, again taking into consideration sizes and budgets.
